## **CENTRAL ELECTIONS COMMISION OF ALBANIA**

Coordinate of the period of th	EC Mobile APP  Description  CEC Mobile APP  Description  Description	Why What Who Why Why Why Why Why Why Why What	A rich internet mobile web application (RIA) that serves as the sole informative hub for election related matters.  It offers more efficient and visually attractive resources with a more interactive user interface and better understanding.  It is a source of information for all citizens/voters, NGOs, political parties, international partners, CEC administration, CEC level II & III electoral administration, electronic identification operators and electronic voting ones, etc.  This ICT solution enables live tracking through the CEC Mobile App of thousands of security seals used to close ballot boxes sent from CEC to CEAZs and then VCCs.  It reduces the time of delivering thousands of these seals and documenting such process which is currently paper based and will instead use RFID technology to scan OR codes. Guarantees accountability and integrity of the process as CEC will have live information about the distribution of electoral materials and when each polling station has started and closed the voting process.  All levels of CEC electoral management bodies (VCCs at the polling station, CEAZs, CEC headquarters).  This platform enables political parties and candidates to report online income and expenses in calendar years and during election campaigns.  It contributes to strengthening the institutional oversight capacities related to political parties financing and misuse of state resources during the electoral campaigns.  The platform will be used by CEC electoral campaign monitors, CFO-s of political parties, candidates, CEC auditors, CEC administration.  After candidates and political parties have reported online their income and expenses the same platform shall enable CEC independent auditors to also assess and deliver their own report upon that delivered from political parties and candidates. All communication will be online and data shall be made available in open data.  It contributes to strengthening the institutional oversight capacities related to political parties financing and misuse of state resource	€30K	Budget allocated; project implemented.
